IN THE CLAIMS

Please add newly presented claims 21-25. Please amend the claims as follows:

1. (Currently Amended) In a data processing system including a plurality of processors each directly coupled via a system memory bus wherein a first processor of said plurality of processors contains a level one cache memory directly coupled to a level two cache memory which is directly coupled to a level three cache memory via a level three cache controller, said level two cache memory containing cache storage and tag storage and containing a circuit for SNOOPing said system memory bus, the improvement comprising:

A first dedicated path between said system memory bus and said cache storage and a second dedicated path between said system memory bus and said tag storage.

2. (Previously presented) A data processing system according to claim 1 further comprising control logic directly coupled to said cache storage and said tag storage which provides the highest priority for said SNOOPing.

3. (Previously presented) A data processing system according to claim 2 wherein said level two cache memory further comprises:

 \mathcal{J}

A duplicate tag memory.

4. (Previously presented) A data processing system according to claim 3 wherein said plurality of processors further comprises

A plurality of instruction processors.

5. (Previously presented) A data processing system according to claim 4 wherein said level three memory further comprises:

A level three cache memory.

- 6. (Currently Amended) A data processing system comprising:
- a. A plurality of processors including a first processor containing a level one cache memory;
- b. A level two cache memory containing a data memory and a tag memory directly coupled to said level one cache memory;
- c. A system memory bus directly coupled to said plurality of processors and directly coupled to said data memory and directly and independently coupled to said tag memory; and

d. A SNOOP request placed on said system memory bus and directly coupled to said tag memory.

 \mathcal{D}_{I}

7. (Previously presented) A data processing system according to claim 6 further comprising:

A data request transferred from said level one cache memory to said level two cache memory.

8. (Previously presented) A data processing system according to claim 7 further comprising:

Control logic within said level two cache memory which provides priority of said SNOOP request over said data request.

- 9. (Previously presented) A data processing system according to claim 8 further comprising:
- a. A level one tag memory located within said level one cache memory; and
- b. A duplicate tag memory within said level two cache memory which maintains a duplicate of information within said level one tag memory.
- 10. (Previously presented) A data processing system according to claim 9 wherein said SNOOP request is directly coupled to said duplicate tag memory.

- of data within a level one cache memory of a processor having a level one tag memory directly coupled to a level two cache memory containing a tag memory and a data memory wherein said level two cache memory is directly coupled to a system memory bus to said data memory via a first dedicated path and to said tag memory via a second dedicated path comprising:
 - a. Formulating a SNOOP request;
- b. Presenting said SNOOP request on said system memory bus to said level two cache memory;
- c. Routing said SNOOP request directly to said tag memory via said second dedicated path; and
 - d. Processing said SNOOP request.
- 12. (Original) A method according to claim 11 further comprising:
- a. Presenting a data request from said level one cache memory to said level two cache memory; and
- b. Granting priority to said SNOOP request over said data request.
- 13. (Previously presented) A method according to claim 12 further comprising:

Maintaining a duplicate copy of said level one tag memory within a duplicate tag memory within said level two cache memory.

 \mathcal{Q}'

14. (Previously presented) A method according to claim 13 further comprising:

Routing said SNOOP request to said duplicate tag memory.

15. (Previously presented) A method according to claim 14 further comprising:

Processing said SNOOP request regarding said duplicate tag memory.

- 16. (Currently Amended) An apparatus comprising:
- a. Executing means for executing program instructions;
- b. <u>Level one caching</u> means directly coupled to said executing means for level one caching data;
- c. Requesting means directly coupled to said executing means and said level one caching means for requesting a data element if said executing means requires requesting of said data element and said level one caching means does not contain said data element;
- d. <u>Level two caching</u> means directly coupled to said requesting means for level two caching;

- e. Storing means located within said level two caching means for storing level two caching data;
- f. Maintaining means located within said level two caching means for maintaining level two tags; and
- g. <u>SNOOPing</u> means directly coupled <u>via a dedicated path</u> to said maintaining means for directly SNOOPing said level two tags.
- 17. (Currently Amended) An apparatus according to claim 16 further comprising:
- a. <u>Granting</u> means directly coupled to said storing means and said maintaining means for granting priority to a SNOOP request over said data element request.
- 18. (Currently Amended) An apparatus according to claim 17 further comprising:
- a. <u>Bussing</u> means directly coupled to said level two caching means for bussing system memory data;
- b. <u>Interfacing</u> means directly coupled to said bussing means for interfacing said bussing means directly to said storing means; and
- c. <u>Interfacing</u> means directly coupled to said bussing means for interfacing said bussing means directly to said maintaining means.

19. (Currently Amended) An apparatus according to claim 18 further comprising:

 \mathcal{J}

- a. Recording means located within said level one caching means for recording level one tags; and
- b. <u>Duplicating</u> means located within said level two caching means and directly coupled to said recording means for duplicating said level one tags.
- 20. (Currently Amended) An apparatus according to claim 16 further comprising:
- a. <u>SNOOPing</u> means directly coupled to said bussing means and said duplicating means for SNOOPing said duplicating means.
- 21. (New) A data processing system having a plurality of processors comprising:
 - a. a main memory;
 - b. a system bus responsively coupled to said main memory;
- c. a plurality of cache memory units wherein each of said plurality of cache memory units is dedicated to a different one of said plurality of processors;
- d. a plurality of cache data storage units wherein each of said plurality of cache data storage units is located in a different one of said plurality of cache memory units;

7

- e. a plurality of tag storage units wherein each of said plurality of tag storage units is located in a different one of said plurality of cache memory units;
- f. a plurality of first direct paths wherein each of said plurality of first direct paths directly couples a different one of said plurality of cache data storage units to said system bus; and
- g. a plurality of second direct paths wherein each of said plurality of second direct paths directly couples a different one of said plurality of tag storage units to said system bus.
- 22. (New) A data processing system according to claim 21 wherein at least one of said plurality of processors further comprises an instruction processor.
- 23. (New) A data processing system according to claim 22 wherein said at least one of said plurality of processors further comprises a dedicated level one cache memory.
- 24. (New) A data processing system according to claim 23 wherein said dedicated level one cache memory further comprises a read only instruction cache memory.

 $\mathcal{D}/$

25. (New) A data processing system according to claim 24 wherein said dedicated level one cache memory further comprises a read/write operand cache memory.
